

COMIC CRAFT PROJECT

Demonstration Phase

1. Introduction

The demonstration phase of the Comic Craft project is conducted to present the completed application and explain how its major features work. During the demonstration, the project team shows the system workflow, comic creation process, important modules, and final output to the project guide, evaluator, or users.

2. Objectives of Demonstration

1. To demonstrate the main features and functions of Comic Craft.
2. To explain the workflow of creating and editing a comic.
3. To show the user interface and important system modules.
4. To demonstrate the final comic output and available export options.
5. To collect feedback and clarify questions from the evaluator or users.

3. Demonstration Procedure

Step	Demonstration Activity
1	Introduce the Comic Craft project, its purpose, objectives, and key features.
2	Launch the application and explain the home screen or dashboard.
3	Create a new comic project and show the available tools.
4	Add comic panels, characters, images, backgrounds, and dialogue text.
5	Edit the comic layout, text, and visual elements.
6	Save the project and demonstrate how previously saved work can be opened.
7	Preview the completed comic and check the final appearance.
8	Demonstrate the export or download process, if available.
9	Explain the testing results and important improvements made.
10	Answer questions and collect feedback from the evaluator or users.

4. Key Features to Demonstrate

Feature	Demonstration
Comic Creation	Show how a new comic project is created.
Panel Management	Show how panels are added, arranged, and edited.
Characters & Images	Show how characters or images are inserted and positioned.
Dialogue / Text	Show how speech, captions, and other text are added and edited.
Editing Tools	Demonstrate available editing and customization options.
Save & Open	Demonstrate saving a project and reopening it when required.
Preview	Show the completed comic before final output.

Feature	Demonstration
Export	Demonstrate exporting or downloading the finished comic, if supported.

5. Demonstration Requirements

Before the demonstration, the project team should ensure that the application is working correctly, the required software and hardware are available, sample comic content is prepared, and the final version of the project is ready. A stable internet connection should be available if any project feature depends on online services.

6. Expected Outcome

At the end of the demonstration, the evaluator or user should understand the purpose of Comic Craft, its major features, the comic creation workflow, and the final result. Any questions or feedback received during the demonstration can be recorded for future improvements.

7. Conclusion

The demonstration phase is an important part of the Comic Craft project because it provides a practical presentation of the completed system. It helps confirm that the project objectives have been achieved and gives users or evaluators an opportunity to understand, evaluate, and provide feedback on the application.
