

COMIC CRAFT PROJECT

Documentation Phase

1. Introduction

The documentation phase of the Comic Craft project focuses on preparing clear and complete information about the system. It records the project requirements, design, development process, testing procedures, user instructions, and final results. Proper documentation makes the project easy to understand, maintain, and use.

2. Objectives of Documentation

1. To provide a complete record of the Comic Craft project.
2. To describe the system requirements and project objectives clearly.
3. To document the design, modules, features, and workflow of the application.
4. To provide instructions for users and developers.
5. To make future maintenance, updates, and troubleshooting easier.

3. Documents Prepared

6. Technical Documentation

Technical documentation describes the technologies, system architecture, modules, data flow, database or storage structure, important interfaces, and implementation details. It is mainly useful for developers who need to maintain or extend the Comic Craft application.

7. Documentation Standards

All project documents should use clear headings, consistent formatting, simple language, correct terminology, version information, and properly labelled diagrams or tables. The documentation should be updated whenever major changes are made to the project.

8. Conclusion

The documentation phase provides a complete written record of the Comic Craft project. It helps users understand the application and helps developers maintain and improve the system. Well-organized documentation also supports project evaluation, future development, and troubleshooting.
