

Project Design Phase for Comic Craft

The Project Design Phase is the second stage in developing Comic Craft software. In this phase, the system structure and design are planned based on requirements.

1. System Architecture Design: Defines overall structure such as client-server or web-based system.
2. Module Design: - User Interface Module (UI) - Comic Editor Module - Asset Library Module (characters, backgrounds) - Save and Export Module
3. Database Design: Stores user data, comic projects, templates, and assets.
4. Interface Design: Designs screens for easy interaction like drag-and-drop editor, toolbars, and preview panels.
5. Input and Output Design: Input: user actions like adding characters, typing text. Output: finished comic pages in image or PDF format.
6. Security Design: User login, data protection, and secure storage.
7. Conclusion: Design phase provides a clear blueprint for developers to build Comic Craft efficiently.
