

Requirement Analysis Phase for Comic Craft

Requirement Analysis is the first and most important phase in developing Comic Craft software. In this phase, the needs and expectations of users are identified and documented.

1. User Requirements: The system should allow users to create comics easily using templates, characters, and text bubbles. Users should be able to edit, save, and share their comics.
2. Functional Requirements:
 - Create new comic projects
 - Add characters, backgrounds, and dialogues
 - Edit and customize designs
 - Export comics as images or PDFs
3. Non-Functional Requirements:
 - User-friendly interface
 - Fast performance
 - Compatibility with multiple devices
 - Data security
4. System Requirements: The application should work on web and mobile platforms with basic internet access.
5. Constraints: Limited storage, device compatibility, and internet speed may affect performance.
6. Conclusion: Requirement Analysis ensures that Comic Craft meets user expectations and helps in building an efficient system.
