

SCALABILITY & FUTURE PLAN

THE COMIC CRAFT FRAMEWORK // PRODUCTION SCRIPT

PANEL I: THE FUTURE EXPANSION (NEXT ISSUES)

Architectural layout outlining system scalability thresholds and product expansion targets. The blueprint guarantees the engine handles microservice volume surges as user demand scales globally.

PANEL II: SCALABILITY ARCHITECTURE HORIZONS

- **Volume Scaling (Expanding the Print Run):** Transitioning core compute structures to containerized multi-region orchestrators (Kubernetes clusters) to manage a 10x influx of simultaneous users.
- **Data Pipeline Optimization (Faster Inking):** Deploying high-throughput queuing structures (Kafka/Redis) to separate operational workflows from persistent storage layers.

PANEL III: FUTURE ISSUE ROADMAP (VOLUME II)

- **Phase I (The Team-up Arc):** Integrate advanced cross-platform SDK extensions and external webhook structures.
- **Phase II (AI Automation Core):** Introduce predictive asset provisioning modeling layers to forecast system demand surges automatically.
